

Project – Part 3 (Group Project, 5 Marks)

Group #5:

Student ID	Name	Surname
202219102	Xiaoyuanying	Kuang
202219015	Jun	Qi
202219044	Yueheng	Wang
202219072	Fanghua	Dai
202219077	Jiayi	Li

Case Study

High-tech Restaurant.

The restaurant maintains an electronic catalogue for the list of food and beverage items that it provides. Meal customization is supported. Customers are provided by a unique APP to order food and pay bill on premises, to order online and to make bookings. An extended customer record is maintained, so it is possible to build a profile for the different customers. Data collection includes traditional user data (e.g. requested meals/beverages) integrated with additional data (e.g. time of purchase or visit, number of people attending, etc.) to increase the profile accuracy. Premium customers are awarded with discounts, as well as customised offers based on the profile generated are periodically sent to customers. The platform is connected to suppliers and provides an automated estimation of food/beverage requests through an external AI-powered service. These requests are validated by the manager in the system and, then, is automatically sent to the different providers. A similar service is available to connect food delivery services: a delivery request received through the restaurant APP can be automatically forwarded to the delivery company.

Feedback (from instructors)

Group 5:

Great presentation. Good work. I guess you can improve as follows:

- An important stakeholder is missing: Restaurant Staff (e.g. Chef, Waiter, etc.)
- At Level 2, you are adopting one single container to describe a Software System. That is ok but

I would like to see a bit more of detail. Please better structure your architecture by adopting more than one container to describe them.

软件设计是个性化的工作，没有标准答案。下面几点建议仅供大家参考

(1) 按面向对象思维考虑问题：从 Level1 开始一个 software system 集中处理一个大的核心对象。课件中图书管理为例，Library port 处理图书的借、还和评论，而 Analytices system 主要是对 library port 系统产生的数据记录的处理。两个 software system 处理的核心对象不同。

(2) 按核心利益相关者考虑问题：Library port 主要为读者提供服务，读者是最核心的利益相关者；而 Analytices system 为管理者提供服务，管理者是核心利益相关者。一个 software system 服务一类主要利益相关者。

(3) 按现实开发角度考虑问题：一个系统组成部件的设计应尽量能够在一张 A4 纸或一页 ppt 中清晰展示，如果出现过于拥挤、字体很小才能容纳的情况，应该考虑进行拆分。设计结果呈现出来做到清晰、简洁。

(4) 从软件体系结构的视角，设计以核心用户的核心业务为重点，核心业务需求要能够在系统中找到对应的详细设计，相关的支持系统（如支付/定位等）不能省略。不是太核心的功能不用过多设计，甚至可以不计。

(5) 系统中逐级命名 software system .container.component 表意清晰、统一。(命名有具体确定含义, 不使用过于通用的表意不清的名称如 Query|Search)

Feedback (from peers)

C4 has a clear structure, but the content is slightly lengthy, so it would be better if it could be streamlined.

1. Revised solution after initial peer-review and presentation (5 marks, Group assessed)

You should **address the feedback received** and provide a **revised version of your solution**.

For each component of your project that **you are going to modify**, please provide:

- **Original version** of the diagram / table
- **Revised version** (please highlight changes where possible)
- **A short explanation on the change applied**

This is an opportunity to revise and improve your work. In this part of the project, we will assess the **QUALITY of your outcome.**

1. Key Operations

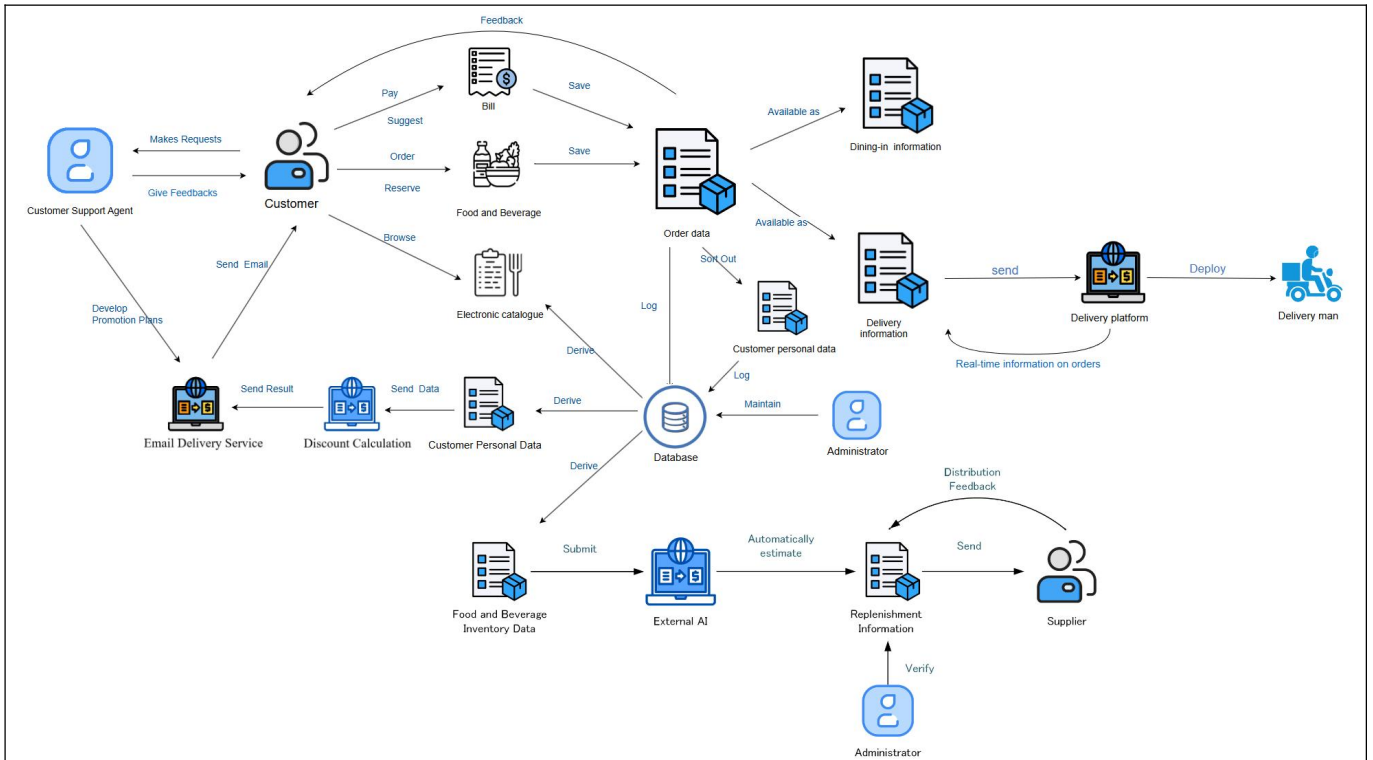

System overview

Add lost stakeholders: waiter and chef to the total system to make the function of the system more perfect.

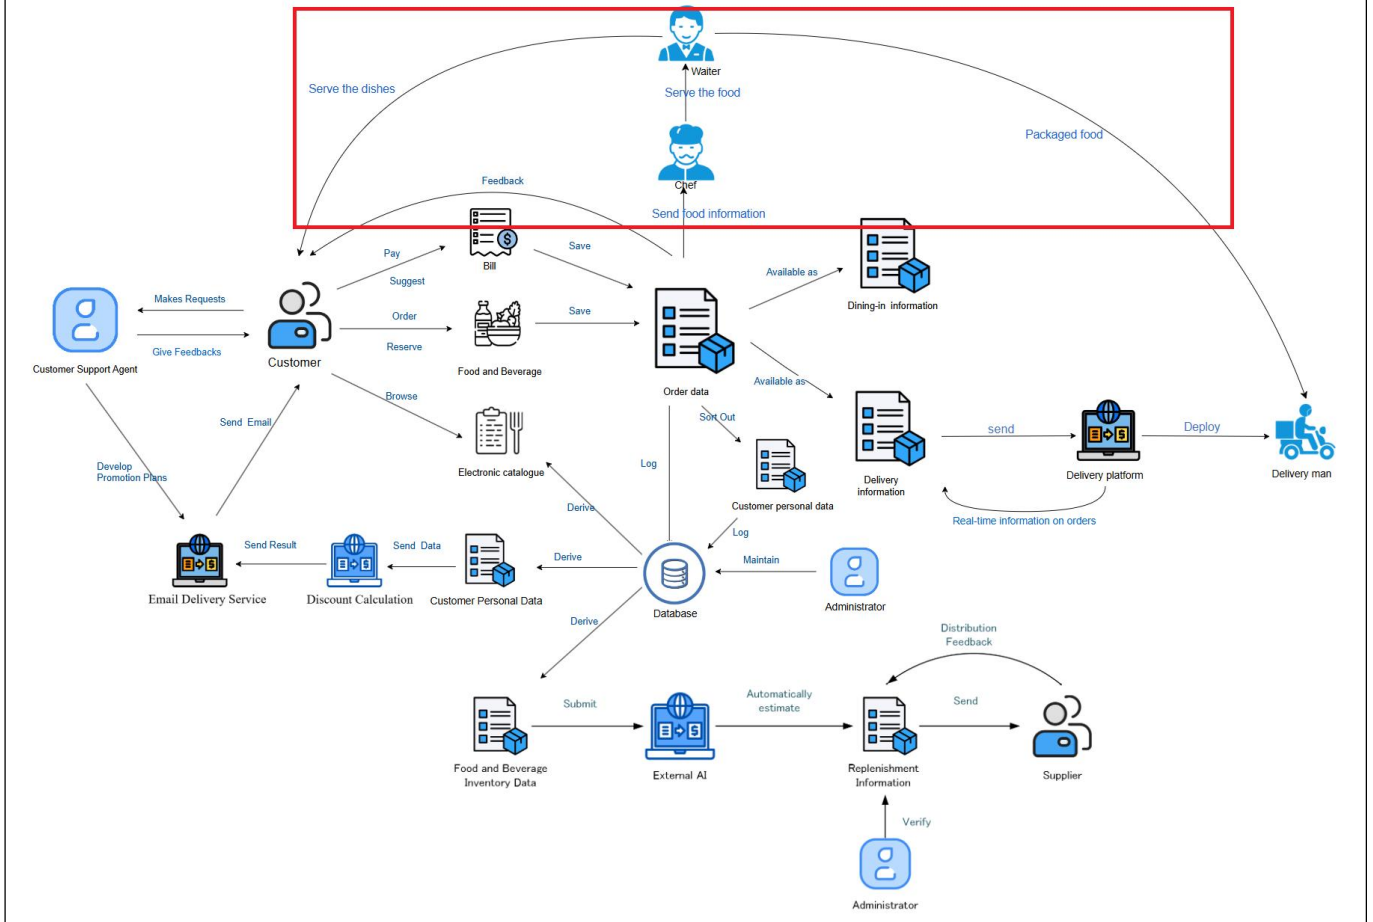

Former

System Conceptualization :

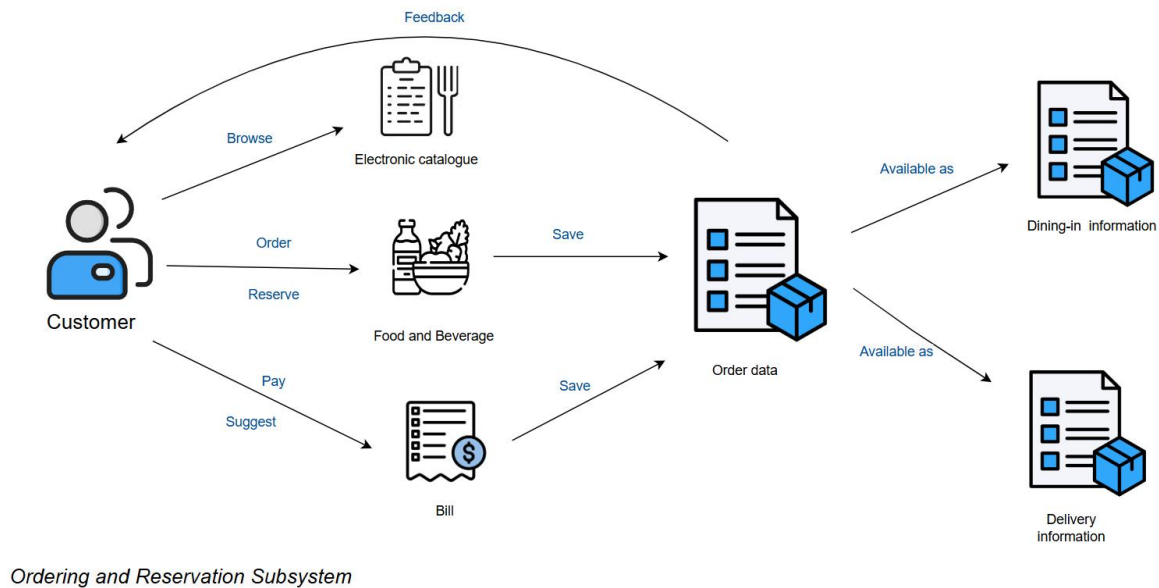

The high-tech restaurant system is designed to enhance customer experience and operational efficiency. It integrates features such as an electronic catalogue, customer app, data collection and analysis, supply chain management, and delivery service integration. The system supports meal customization, smart order processing, and automated supply management. By leveraging AI technology and external services, it optimizes inventory forecasting and food delivery coordination.

Restaurant.Delivery.us1	<i>As a waiter, I want to be able to review and check orders after they are made to ensure the accuracy of delivery.</i>	RestaurantWaiter.Delivery.CheckOrder
Restaurant.Delivery.us2	<i>As a waiter, I want a status update when I deliver an order to the delivery person so that the system records the pickup time and notifies the user.</i>	RestaurantWaiter.Delivery.UpdateStatus
Restaurant.Delivery.us3	<i>As a waiter, I would like to be able to mark special requirements (such as no heat, less salt, etc.) on the packaging bag when packing an order so that the delivery person or customer can more clearly identify the customized content of the order.</i>	RestaurantWaiter.Delivery.MarkOrder
Restaurant.Delivery.us4	<i>As a waiter, I hope to be able to check the expected arrival time of the deliveryman in the system after the order is packaged, so that the delivery can be timely delivered when the deliveryman arrives and the waiting time can be reduced.</i>	RestaurantWaiter.Delivery.CheckStatus
Diagrams		

Delivery Subsystem

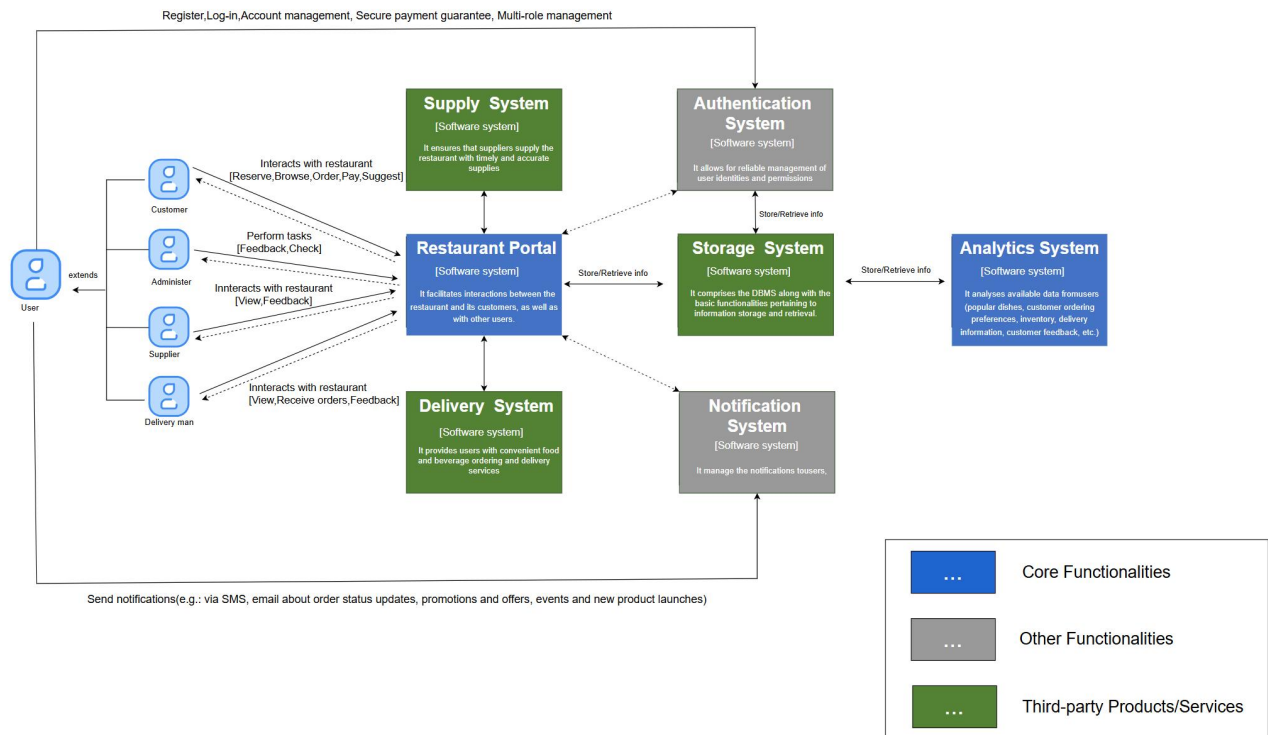

2. Software Architecture

2.1 level 1

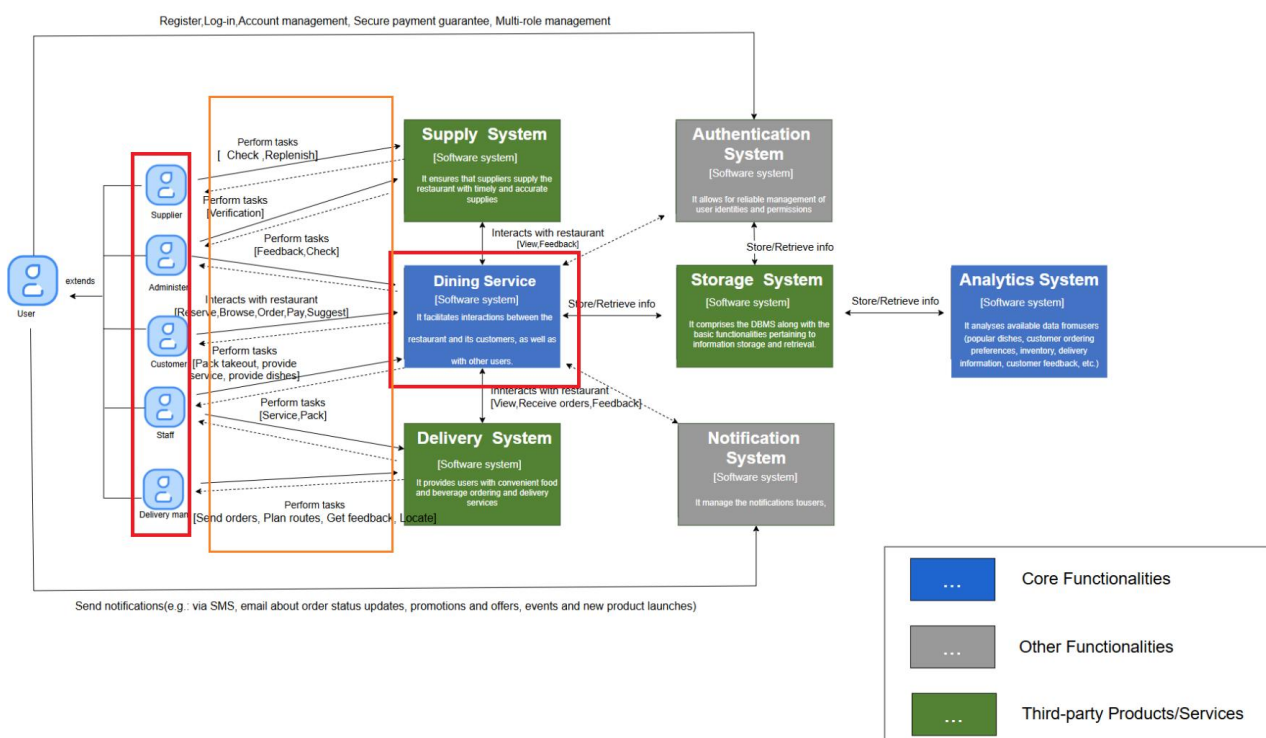

Level 1

For level1, we add the user staff and **split the functions** of the original software system -restaurant portal to form a new structure, **to make the function of each system more independent and clear**

Former

Later

2.2 level 2

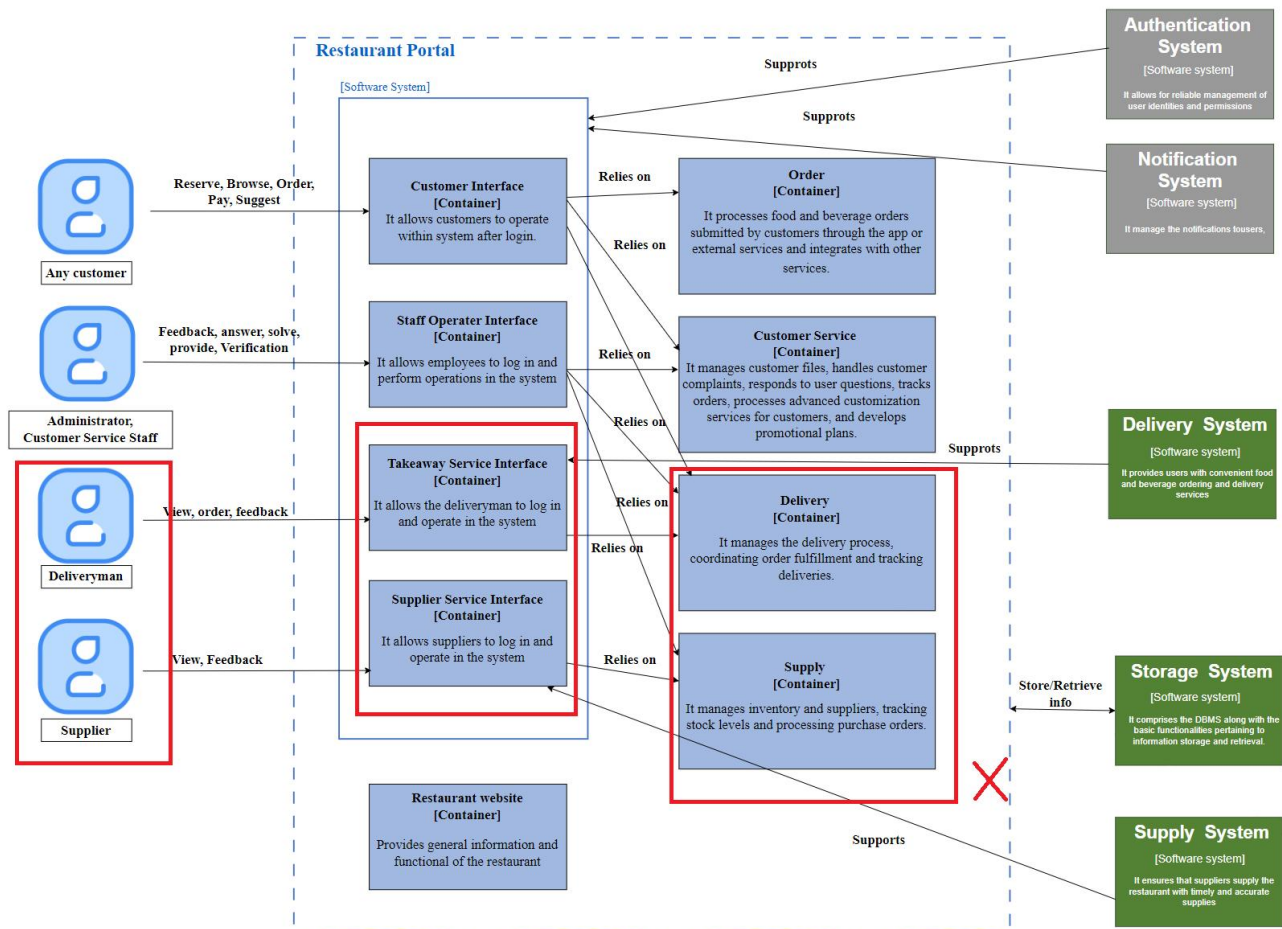

Level2.Dining Service System.Container

For the Dining service subsystem, we changed its name to make the software system clearer. We separated the containers belonging to other software systems. We added an administrator operation interface container to make the container settings more reasonable.

Former

Dining Service System

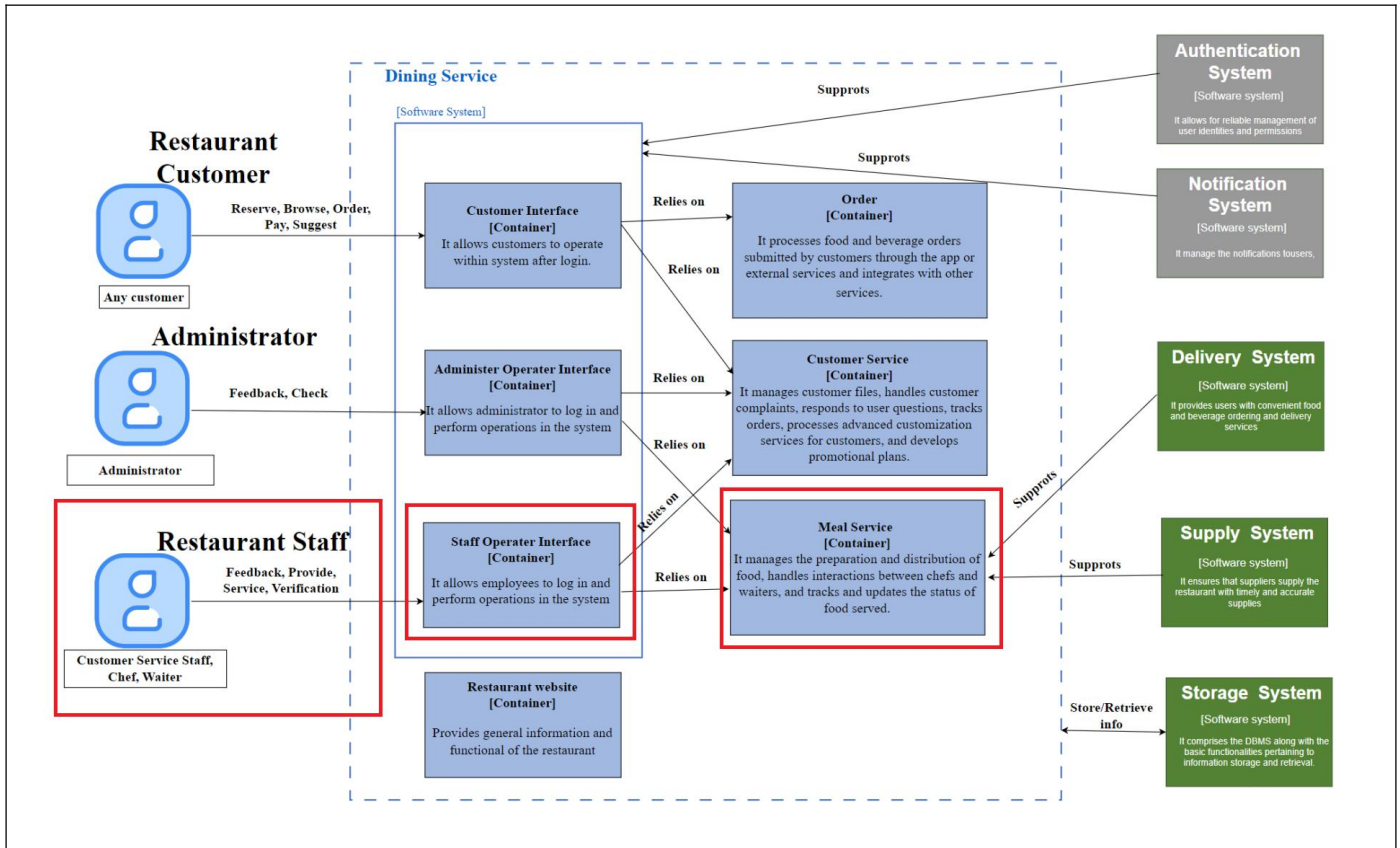

[Software System]

Later

Dining Service System

[Software System]

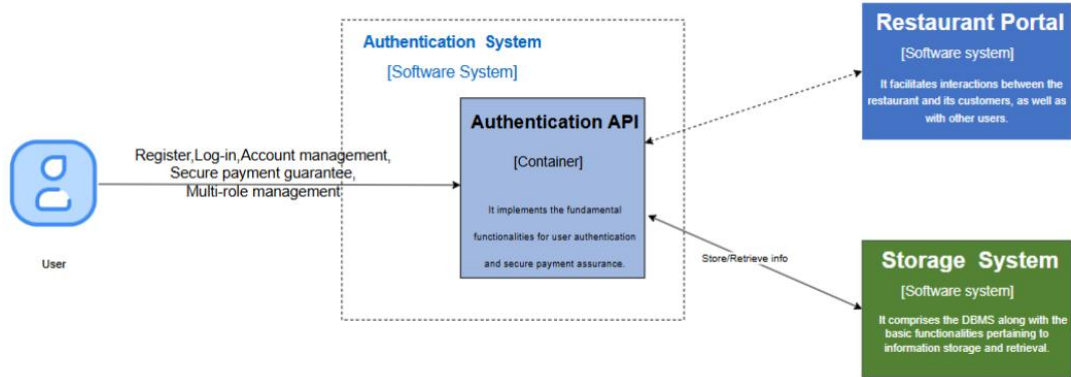

Level2.Authentication System & Notification System & Storage System.Container

Changed the name of the system, **Restaurant Portal -> Dining Service**

Former

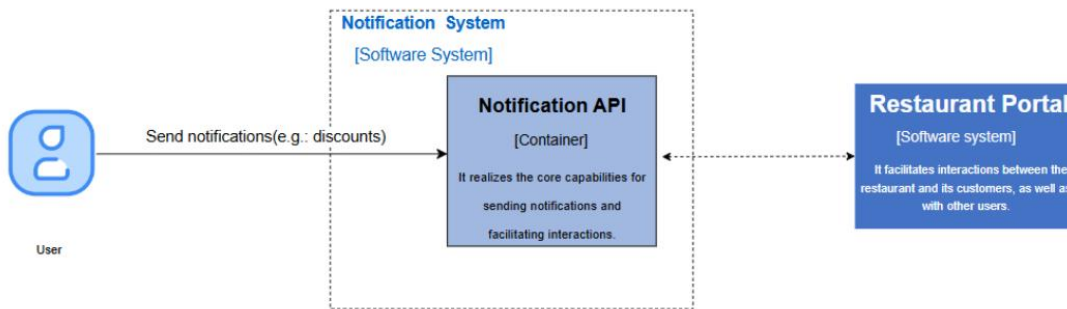

Authentication System

[Software System]

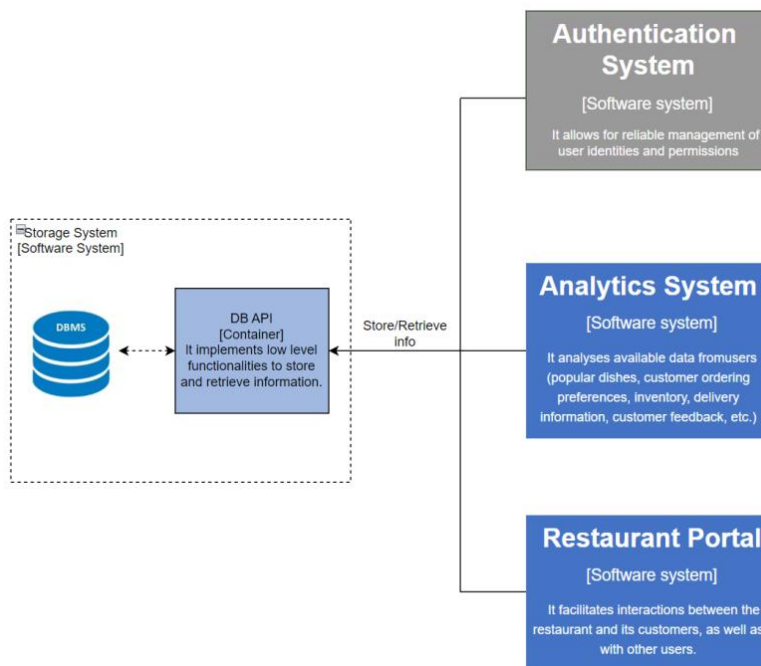

Notification System

[Software System]

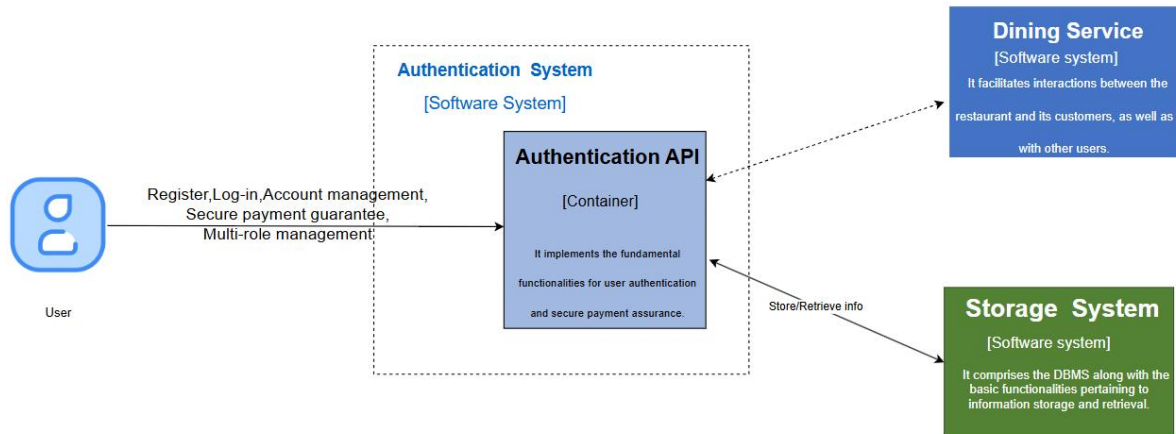

Storage System

[Software System]

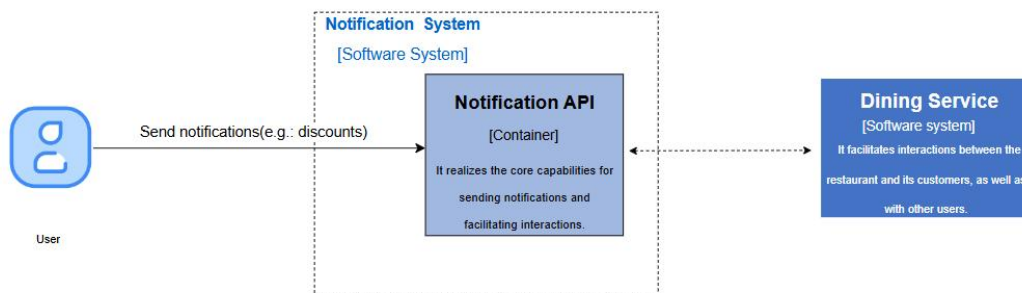

Later

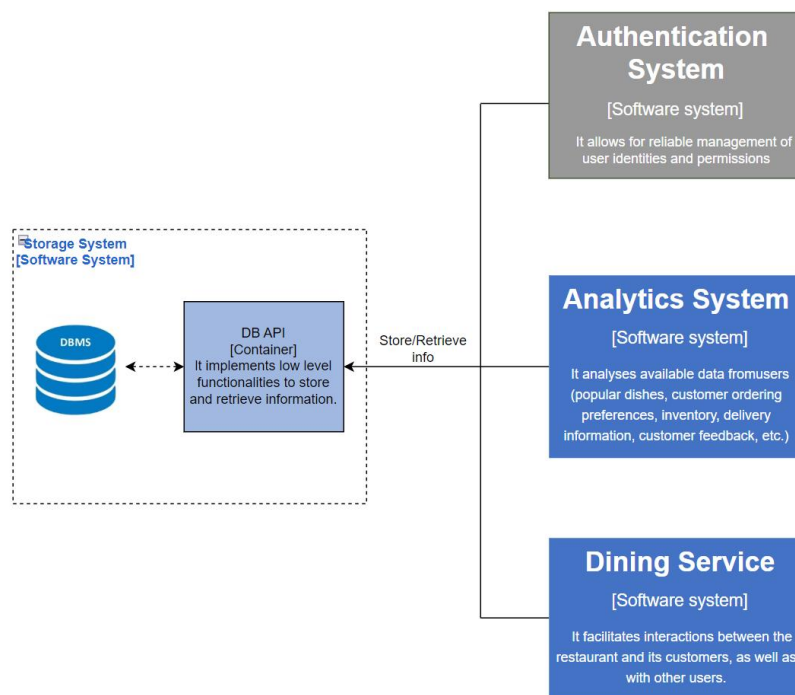

Authentication System [Software System]

Notification System [Software System]

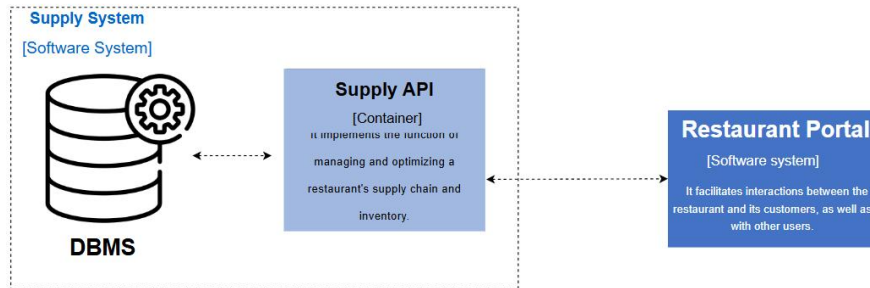

Storage System [Software System]

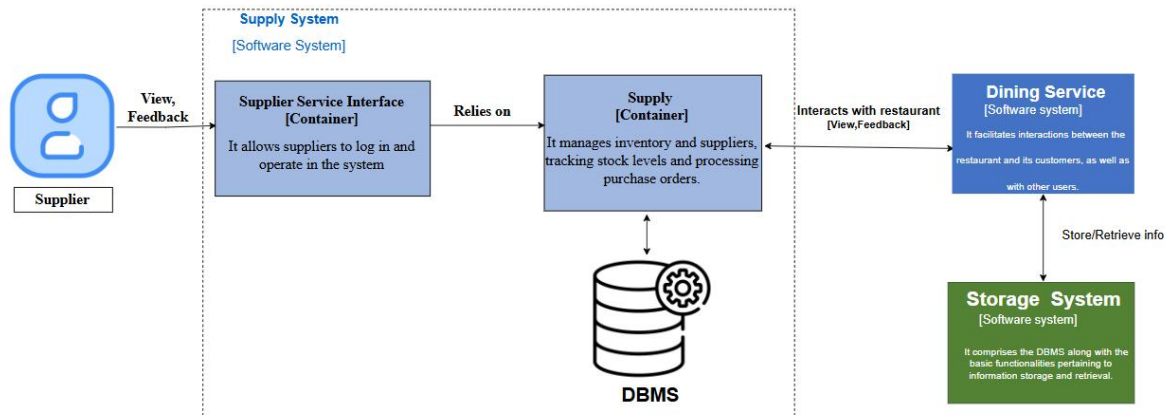

Level2.Supply System.Container

For the supply system, we **add two containers**--Supplier Service Interface and Supply, and introduce supplier to realize the interaction of functions

Former

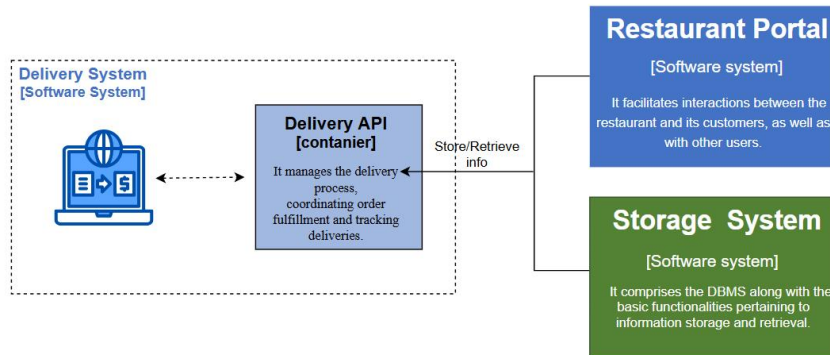

Later

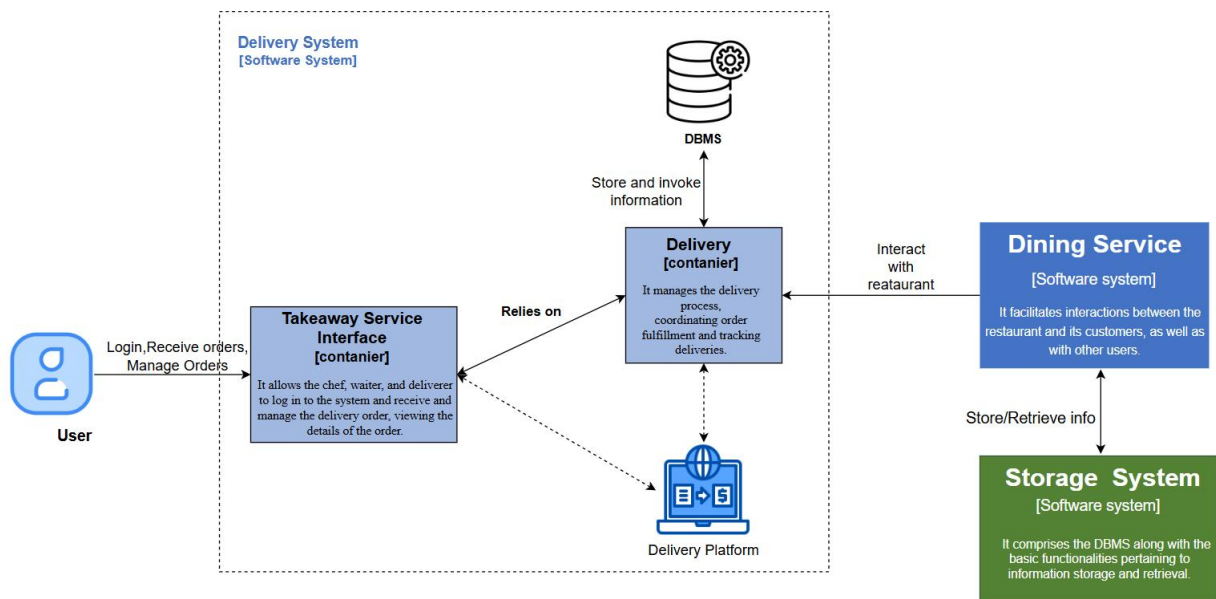

Level2.Delivery System.Container

For the delivery system, we **added two containers** - the delivery service interface and the delivery, and **added DBMS parts** to store and invoke information. Since all users in the system can interact with this function, we **introduced the user to interact** with the delivery interface,

Former

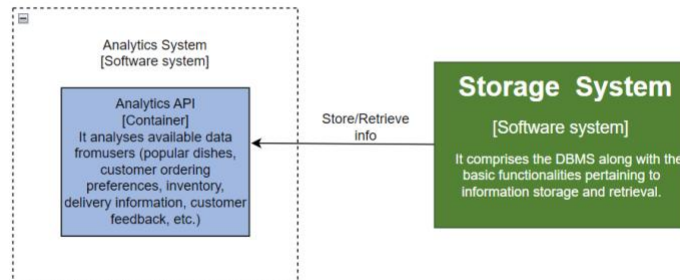

Later

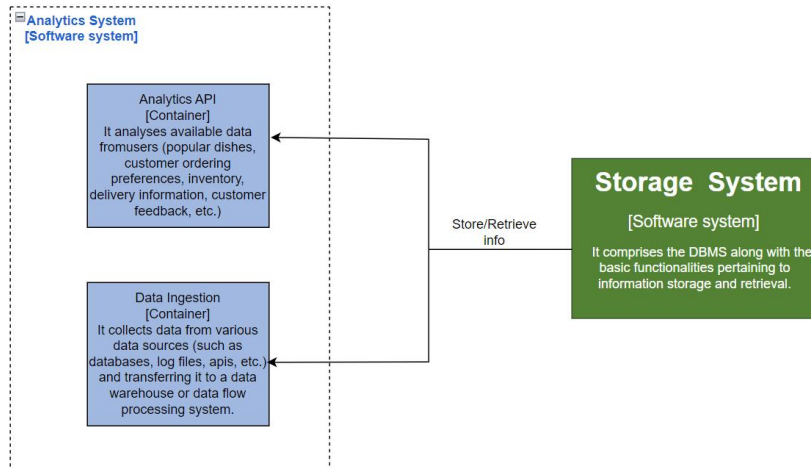

Level2.Analytics System.Container

Add more containers to the level3 diagram to make the system structure clearer

Former

Later

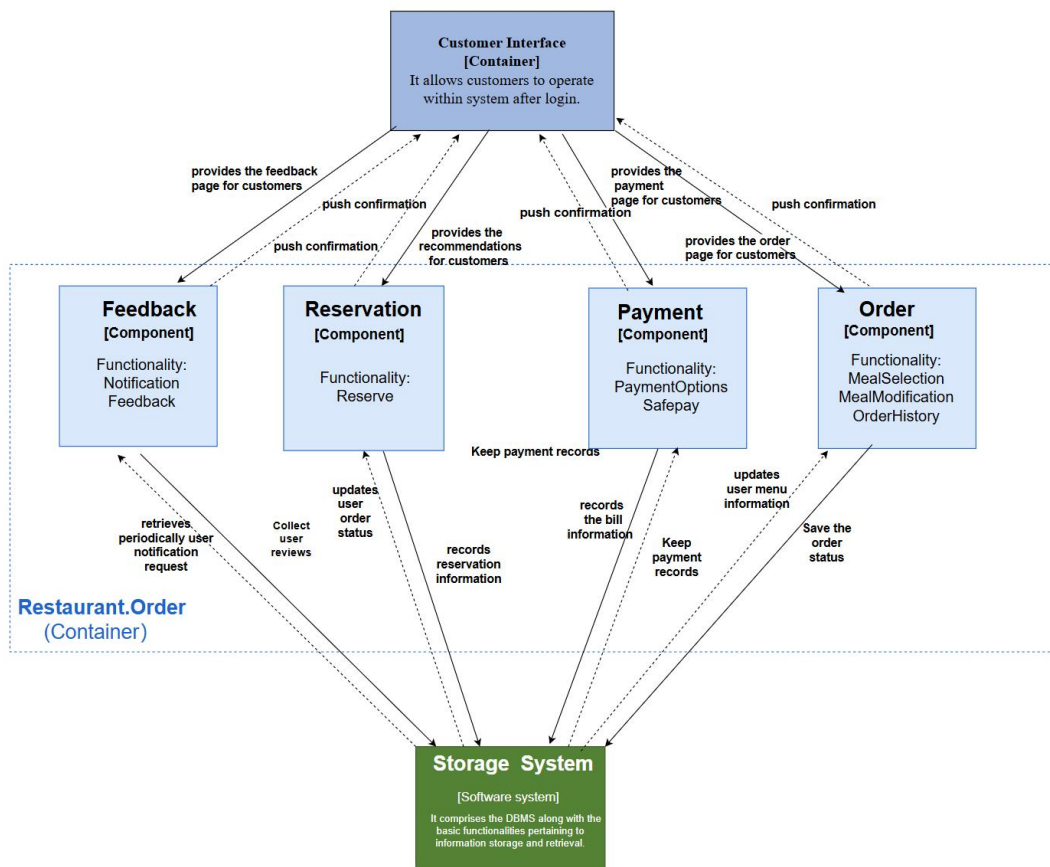

2.3 level 3

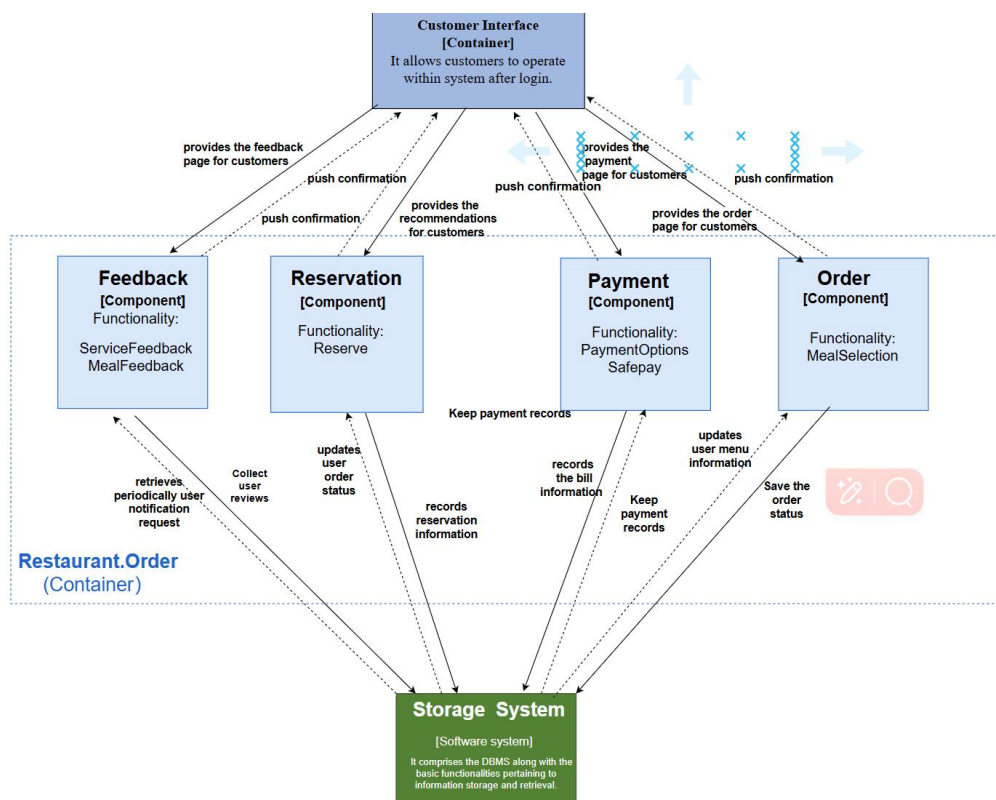

Level3.Restaurant.Order.component

Improved the functionality of each component

Former

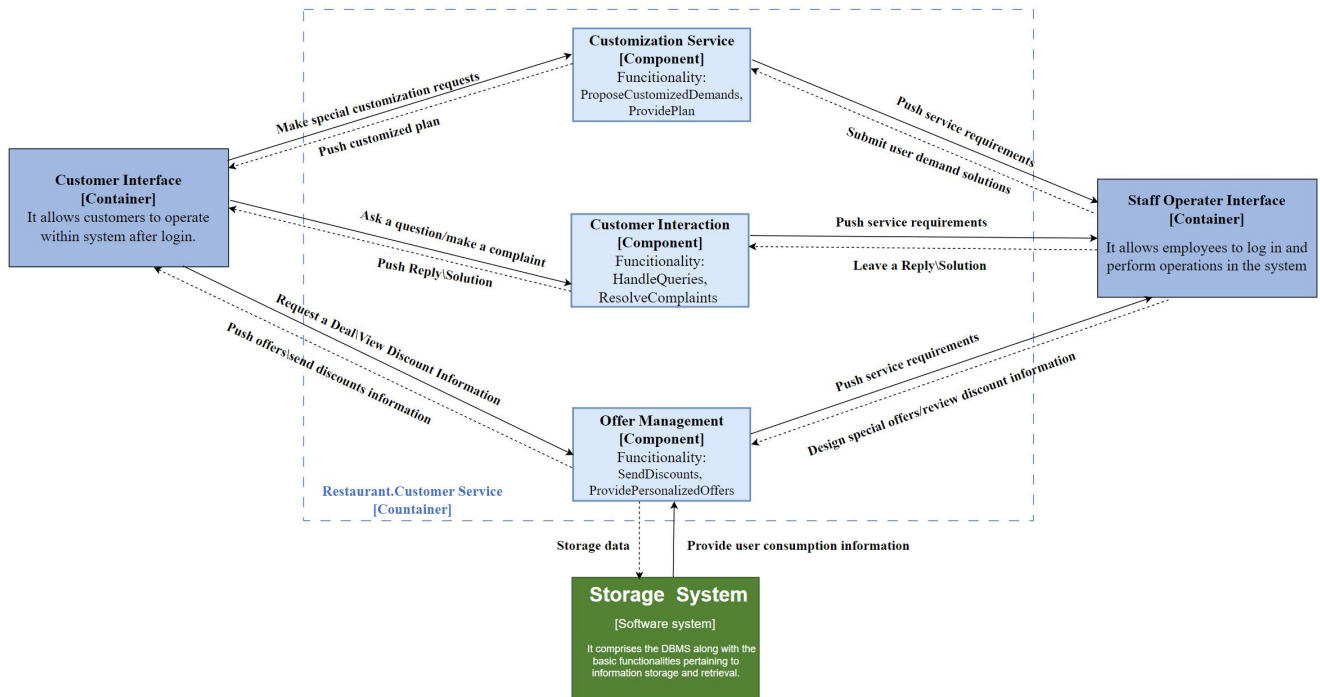

Later

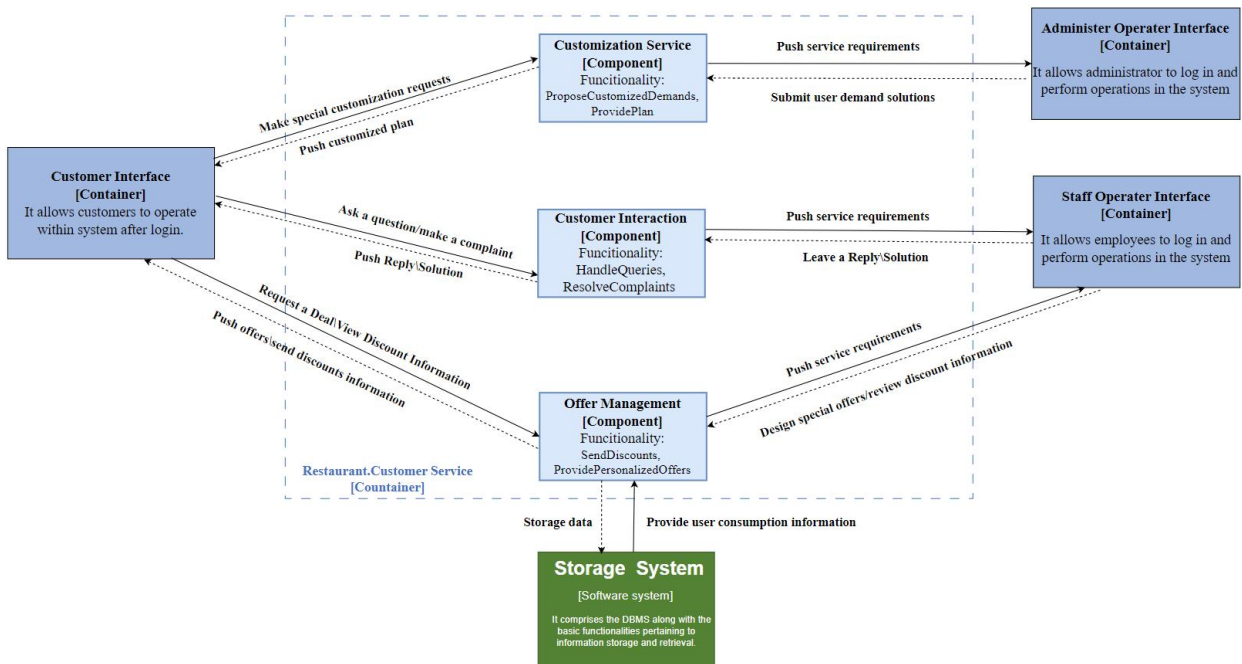

Level3.Restaurant.Customer Service.component

Separating the duties of regular staff and administrators makes the level 3 diagram clearer

Former

Later

Level3.Restaurant.Meal Service.component

Separate the food container to make the working structure of the software architecture clearer.

Former

None
